Masterpiece Art Storage Solutions

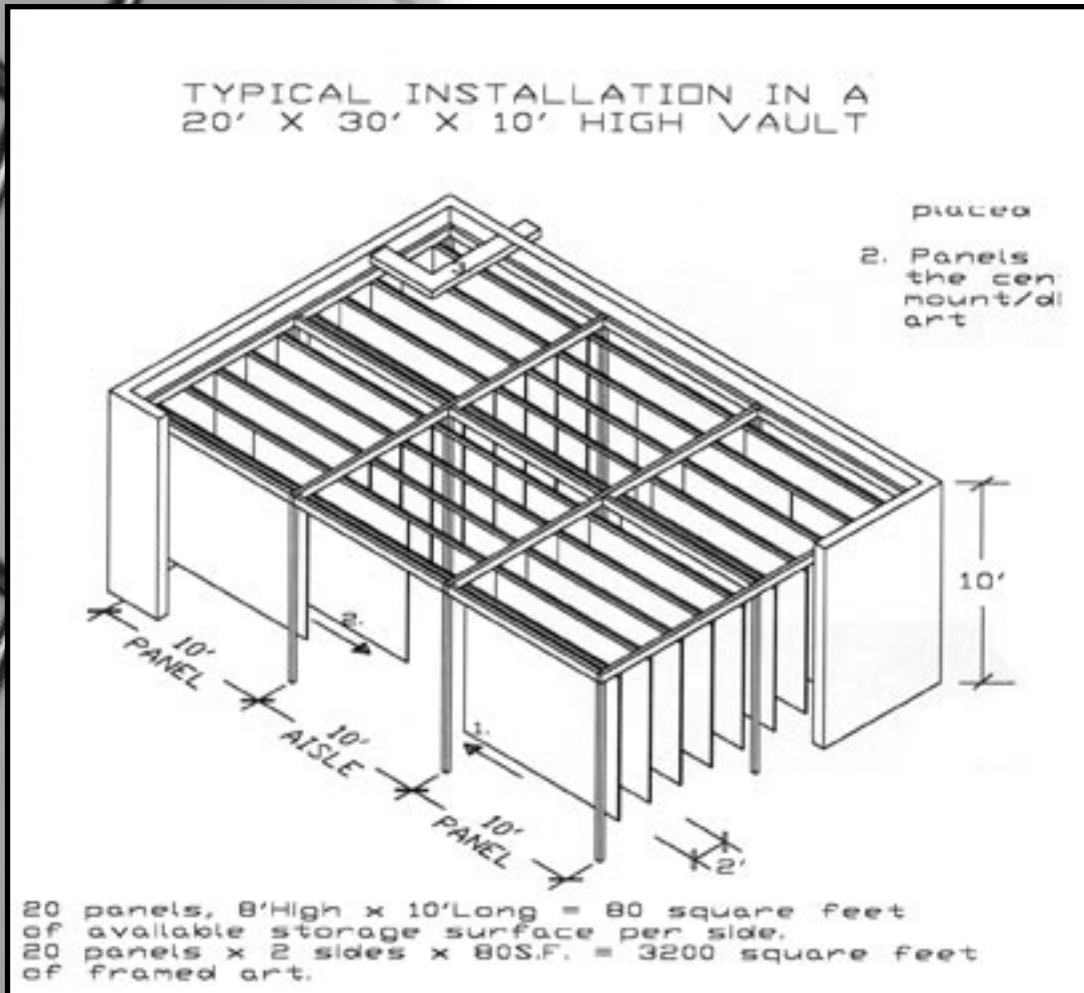

Space in museums is at a premium... and art storage presents many unique challenges: climate control, security and the escalating costs of transportation to and from off-site locations.

Masterpiece Storage Systems maximize space efficiency – with practical, cost-effective storage solutions designed especially for museums, art galleries and historical societies.

We offer a wide array of services and solutions to support your storage needs:

- Storage strategies and system design
- Project management and engineering services
- Fabrication, installation, service
- Financing, leasing

Custom | Design Solutions

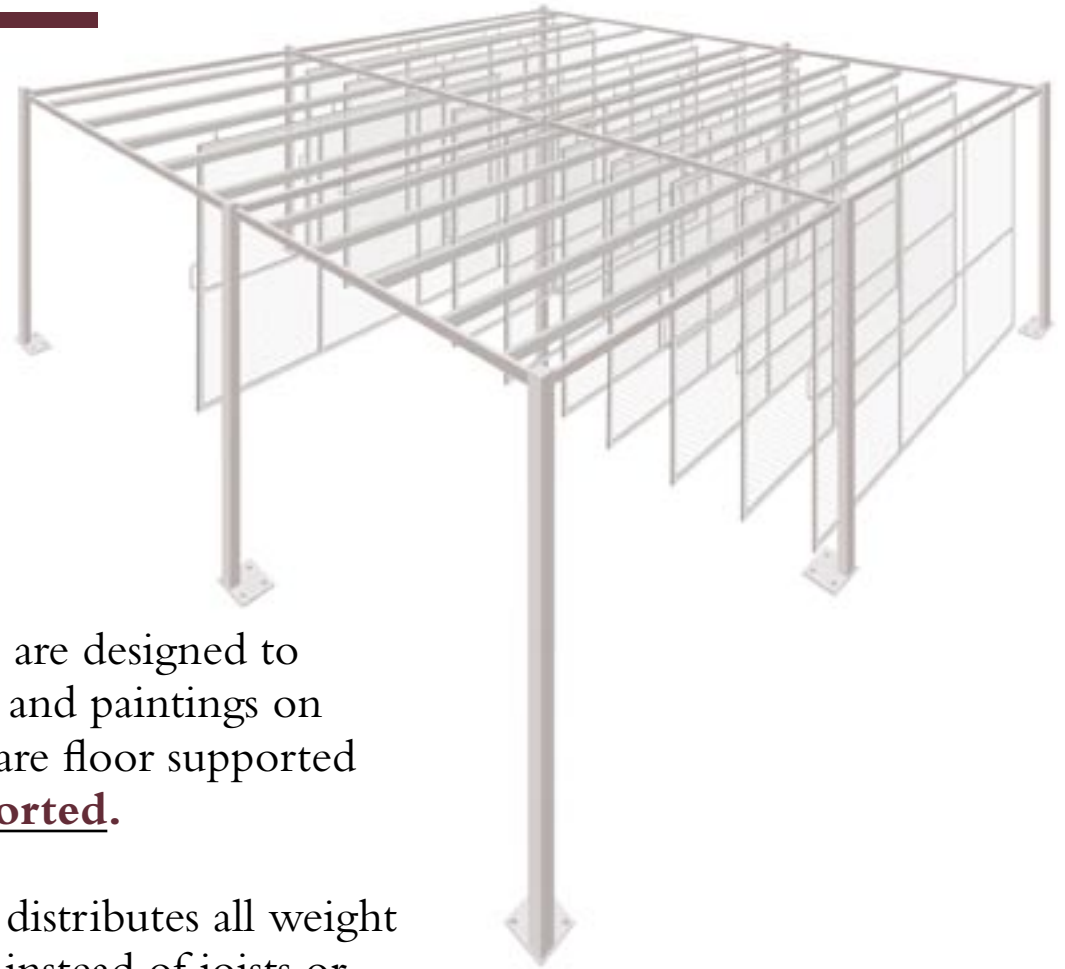

All space planning and storage solutions are individually configured to meet your specific needs.

- Site survey
- Field measurements
- Proposal drawings
- Approval drawings prior to fabrication

Close cooperation with your staff is vital at the planning stage. Plus, we work in partnership with architects, facility managers and art consultants to achieve the smartest use of space.

Benefits of the System

Masterpiece Systems are designed to safely store drawings and paintings on movable panels that are floor supported – **not ceiling supported.**

Load bearing design distributes all weight to the existing floor, instead of joists or ceilings, which are typically not engineered to support these loads.

We offer quick pricing and financing options.

STORAGE SYSTEMS

The Masterpiece Storage Difference

Free standing overhead frame is used to suspend tracks and screens.

Pull-out sliding art screen so artwork can hang on both sides – slides along a specially-designed track.

Steel screen design features woven wire and steel channels vs. an aluminum screen which can deform easily.

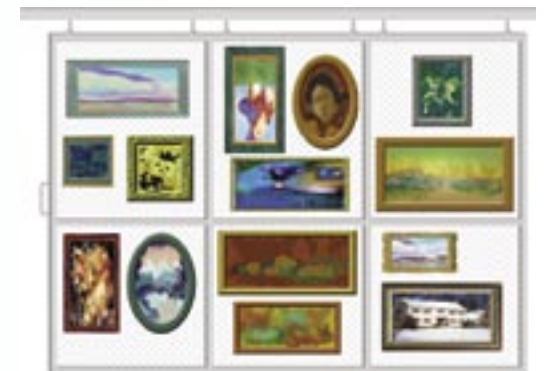

Panel system is completely modular and movable.

Other advantages:

- the system stays below duct work, lights, piping, vents and other building fixtures
- easily adjustable
- variable widths.

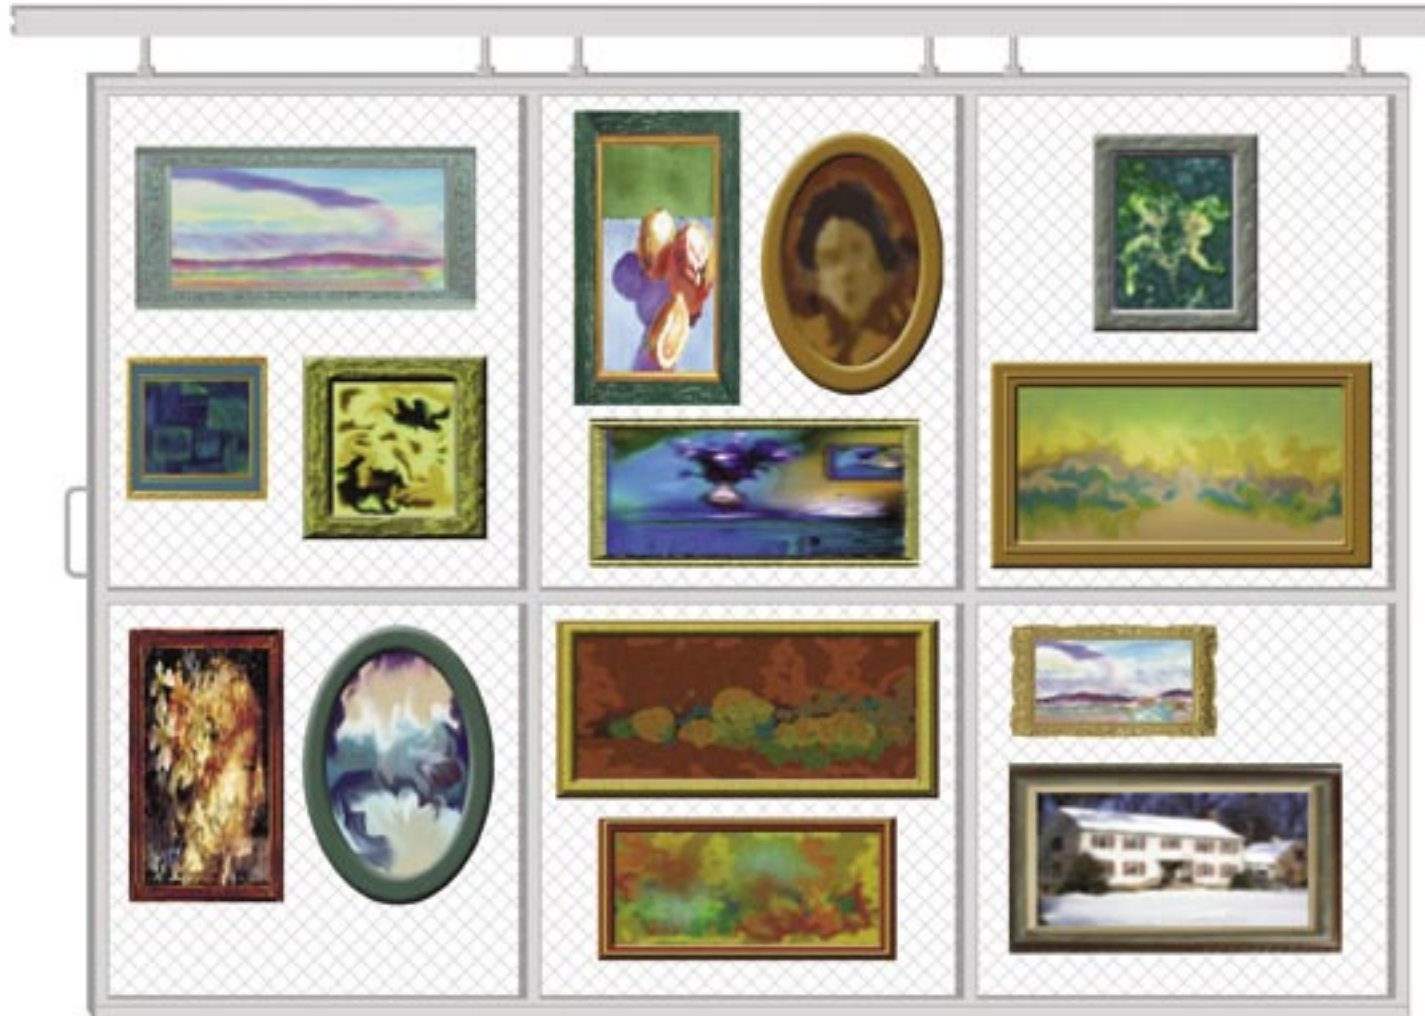

Panel System

Panel System

Additional System Features

High-density storage systems feature: soft start and soft stop, double mesh, easy and smooth progressive movement.

Storage weights up to 400 pounds per panel.

Multiple models, with panel heights up to 12 feet.

Available in standard powder-coated colors to match any decor scheme.

Custom width and height requests always welcome.

STORAGE SYSTEMS

And Another Thing...

We pre-fabricate and install all systems ourselves – not an outside contractor.

We offer free site visits and formal quotes.

Our systems ship in four to eight weeks from receipt of approved drawings.

The growing list of Masterpiece clients include:

- Chicago Art Institute
- Washington University (St. Louis)
- Wichita Center for the Arts
- L.A. Museum
- Birger Sandzen Memorial Gallery
- The Farnsworth Museum (Rockland, Maine)
